Subject:

10/045180

Jan,

When things are up and running......

Please search, including pending, the following from 10/045180:

SEQ ID NO:3 against the DNA database SEQ ID NO:3 as an oligo against protein

SEQ ID NO:6 against DNA SEQ ID NO:6 as an oligo against protein

SEQ ID NO:4 against DNA SEQ ID NO:5 against DNA

Results on paper please.

Thanks!

Jessica H. Roark

```
This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence Quality Assessment:
This entry has been annotated with sequence quality estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than 1 error in 10,000 bp.
Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Submitted (06-JUL-2002) Genome Analysis, Institute of Molecular Biotechnology, Beutenberstr. 11, Jena 07745, Germany (bases 1 to 128544) Lagemann, D. and Platzer, M. NCI_CGAP_DPO is a cDNA library containing the following tissue (8): Subchondral Bone. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996, First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT/T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (TT) 18 tail. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Contact: Robert Strausberg, Ph.D.

/clone="lorgan: mixed (see below); Vector: pT7T3D-Pac
/parmacia) with a modified polylinker; Site_1: Not I;
Site_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (melanocyte 2NbHW, pregnant uterus NbHPU, and fetal heart NbHH19W) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 250232-265223,
340488-34549, and 484488-489479.

//note= "Organ: pooled; Vector: pT7T3D-Pac (Pharmacia) with
a modified polylinker; Site_1: Not I; Site_2: Eco RI;
Equal amounts of plasmid DNA from three normalized
libraries (fetal lung NbHil9W, testis NHT, and B-cell
NCI_CGAP_GCBI) were mixed, and se clicles were made in
vitro. Following HAP purification, this DNA was used as
tracer in a subtractive hybridization reaction. The driver
was PCR-amplified cDNAs from pools of 5,000 clones made
from the same 3 libraries. The pools consisted of
I.M.A.G.E. clones 297480-302087, 682632-687239,
726408-728711, and 729096-731399. Subtraction by Bento
Soares and M. Fatima Bonaldo. "

                                                                                                                                                                                                                                                                                                                                                                                           polypeptide can be used as an antimicrobial, antiparasitic agent or a pesticide. The Def-X polypeptide can be used as a cytostatic (especially anticancer) agent, and as an agent for modulating processes of inflammation, tissue repair and endocrine (especially corticostatic) regulation. The polypeptide can be used in a composition for external topical use, especially in a cosmetic composition. Compositions or external and parasitic infections, especially where the microbial or parasitic infections are Gram-positive or -negative bacterial infections or mycobacterial, fungal or spirochaete infections, or where the viral infections are associated with enveloped viruses, especially HSV and HIV. The compositions can used for prevention and/or treatment of cancers, caspecially melanomas, or liver cancer, prostate cancer, non-small-cell lung cancer or colorectal carcinoma, and for enhancing immunity, especially in the case of AIDS, or preventing immune deficiency, especially in the treatment of psoriasis, as well as for modulating disordary disordary.

    useful as antimicrobial agent,

                                                                                                                                                                                                                                                                                                                                                                               sequence encodes human defensin (Def-X). polypeptide can be used as an antimicrobial, antiparasitic agent or a pesticide. The Def-X polypeptide can be used as a cytostatic agent or especially anticancer) agent, and as an agent for modulating processes of inflammation, tissue repair and endocrine (especially corticostatic) regulation. The polypeptide can be used in a composition for external topical use, especially in a cosmetic composition. Compositions of microbial containing Def-X can be used for prevention and treatment of microbial and parasitic infections, especially where the microbial or parasitic infections or negative bacterial infections or mycobacterial, fungal or spirochaete infections, or where the viral infections are associated with enveloped viruses, especially HSV and HIV.

The compositions can used for prevention and/or treatment of cancer, especially melanomas, or liver cancer, prostate cancer, non-small-cell lung cancer or colorectal carcinoma, and for chhancing immunity, especially in the treatment of postiasis, as well as for modulating inference. Inflammatory processes, especially in the case of AIDS, or preventing immune deficiency, is inflammatory processes, especially in the case of AIDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      52 ATGAGGACCCTCACCCTCTCTCTCTTCTCTGGTGGCCCTTCAGGCCTGGGCAGAG 111

The present sequence encodes human defensin (Def-X). The Def-X polypeptide can be used as an antimicrobial, antiparasitic agent or a pesticide. The Def-X polypeptide can be used as a cytostatic cast of especially anticancer) agent, and as an agent for modulating processes of inflammation, tissue repair and endocrine (especially corticostatic) regulation. The polypeptide can be used in a composition for external topical use, especially in a cosmetic composition. Compositions containing Def-X can be used for prevention and treatment of microbial cand parasitic infections are Gram-positive or -negative bacterial infections or mycobacterial, fungal or spirochaete infections, or where the viral infections are associated with enveloped viruses, especially HSV and HIV. The compositions can used for prevention and/or treatment of cancers, infections are colorectal carcinoma, and for enhancing immunity, especially in the crase of AIDS, or preventing immune deficiency, especially in the treatment of posciaes, as well as for modulating inflammatory processes, especially in the case of AIDS.

This invention relates to a combination comprising several cDNAs that are differentially expressed in activated vascular tissue. The invention are differentially expressed in activated vascular tissue. The invention care also discloses a high throughput method for detecting differentially expressed cDNAs in a sample. The cDNAs of the invention may have antidiabetic; gynaecologically vasotropic and cerebroprotective activities and may be used in gene therapy. The cDNAs of the invention may be used in a mapple, or compound that specifically binds a cDNA of the invention. A protein encoded by the cDNA may be used to screen several cidentify a molecules or compounds to identify a nationally binds a cDNA of the protein, or to produce or purify an antibody to the protein that can be used to detect a protein in a sample or purify a natural or recombinant protein from a sample. The nucleotides may be useful for diagnosing, stading, treating, or monitoring the progression of treatment of a vascular disease, e.g. atherosclerosis, cancer, cornary creptings injury, restenosis, or stroke. The cDNAs can also be used to also injury, restenosis, or stroke. The cDNAs can also be used con algebratesion injury, restenosis, or stroke. The cDNAs can also be used con algebratesion injury, restenosis, or stroke. The cDNAs can also be used con an order a discoules. Antibodies to the proteins encoded by the cDNAs are useful for diagnosing pre-pathologic disorders, and chronic mount or distribution of the profession.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Combination for diagnosing, staging, treating, or monitoring the progression of treatment of a vascular disease, e.g. atherosclerosis, comprises several cDNAs that are differentially expressed in activated vascular tissue.

defensin sequences as well as new defensin related sequences. Two clones expressing new defensin related sequences were extensively characterised and found to contain genes selectively expressed in Paneth cells of the small intestin. These paneth cell-derived defensins are designated human defensin by and human defensins of the deaduced AA sequences of the defensin peptides. Comparison of the deduced AA sequences of the defensin 5 cDNA with the previously reported preprodefensisn shows significant similarity. The deduced AA sequence of defensin 6 cDNA has features similar to (Updated on 25-MAR-2003 to correct PN field.)

```
The invention relates to a combination which, comprises a number of polynucleotide probes comprising a sequence selected from one of the 1490 sequences mentioned in the specification. The combination is useful as an array element in a microarray for monitoring the expression of a number of target polynucleotides. The microarray is particularly useful in the diagnostics and immunopathology and neuropathology. The microarray is useful in diagnostics and immunopathology and neuropathology. The microarray is also useful for forensics and pharmacogenomics. The microarray is also useful for monitoring progression of diseases and for developing sophisticated profiles for the effects of currently available therapeutic drugs. The combination is also useful for purifying a subpopulation of mRNRs, conds and genomic fragments and in research and diagnostic applications. The array can detect changes in expression in a large number of genes coding controls signaling pathway populations which can be used to diagnose various diseases including cancer e.g. adenocarcinoma and leukaemia.

Conditional sidnaling pathway neuropathies e.g. Alzheimer's disease cod my Parkinson's disease. The present sequence represents a polynucleotide monter the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 the printed

                                                                                                                                                                                                                                                                                                                                                                        The present sequence is one of a large number of 5' ESTB derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTB were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dry primed cDNA libraries. Such ESTB are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTB are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTB are also used in diagnostic, forensic, gene therapy and chromsone mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              211 CCACTCCAGGCAAGAGCTGATGAGGTTGCTGCAGCCCCGGAGCAGATTGCAGCGGGACATC 270

The most likely position for initiation of translation occurs at nucleotide 94 and the open reading frame following this point is claimed. The first 18 codons of the claimed ORF (excluding the ATG) encode a sequence of amino acids that resembles other leader sequences and their cleavage sites. The mrs sequence was isolated as clone C-A3 (ATCC 39868) from a cDNA library constructed from total RNA from a patient suffering from chronic phase, ph'-positive CML. The mrs is localised to human chromosome 8, specifically to bands 8q21.1-23.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gene probe for chronic myelogenous leukaemia - esp. useful for distinguishing myeloblastic crisis from lymphoblastic crisis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a method for examining allergic diseases. The method comprises: (a) determining the expression level of defensin 1 gene in the biological sample from a patient; and (b) comparing the expression level with that in the sample of a healthy individual. The method is for examining allergic diseases particularly atopic dermatitis and its diagnosis, which is also applicable in screening candidate compounds for remedies. The present sequence is the

These were isolated from expressed sequences tags (ESTS). They can be used to stimulate cell growth, to regulate haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis, to regulate activin or inhibin e.g. to treat infertility, to regulate haemostasis or thrombolysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g. Parkinson's disease. The present sequence is a coding sequence of the

                                              The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ1119-ABZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for identifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABP68902-ABP69849) are useful as molecular weight markers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cell-proliferative disorders (cancer), neurodegenerative diseases (Parkinson's or Alzheimer's disease), autoimmune diseases (multiple sclerosis, dibebetes, lupue) genetic disorders, wound, burns, incision, disorders, platelet or coagulation disorders, wound, burns, incision,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    448
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           449 AGGAAAAACATGGCCTGCTATTGCAGAATACCAGCGTGCATTGCAGGAGAACGTCGCTAT 508

The invention relates to an isolated polymucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences
(ABZ11119-ABZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polymucleotides are useful for identifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABP68902-ABP69849) are useful as molecular weight markers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cell-proliferative disorders (cancer), neurodegenerative diseases (Parkinson's or Alzheimer's disease), autoimmune diseases (multiple sclerosis, diabetes, lupus) genetic disorders, myeloid or lymphoid disorders, platelet or coagulation disorders, wound, burns, incision, ulcers, liver or lung fibrosis, infections (bacterial, viral, fungal, parasitic), arthritis, etc.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

Sequence 664 BP; 174 A; 168 C; 161 G; 161 T; 0 other;

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. (I') can have respiratory, bronchodilator, antinfinamatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodys receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adheason molecules and their receptors, cytokine and chemokine receptors, and peripheral nervous and non-nervous system peptide transmitters, defensins, growth factors, vasociated proteins. The receptors, binding proteins and malignancy associated proteins. The receptors, binding proteins and malignancy associated proteins. The receptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or surfactort hypoproduction which are associated with a disease or condition and error including temperators.
                                                                                                                                                                                                                                                                                                          Now adenosine antisense oligonucleotide; phosphorothioate; allergy; human; airway disorder; bronchoconstriction; lung inflammation; surfactant depletion; respiratory; bronchodilator; antinflammatory; immunosuppressive; antiasthmatic; analgesic; hypotensive; cytostatic; respiratory obstruction; pulmonary obstruction; impeded respiration; respiratory obstruction; pulmonary vasoconstriction; asthma; RDS; respiratory distress syndrome; pain; cystic fibrosis; allergic rhinitis; pulmonary hypertension; emphysema; pain; cystic fibrosis; allergic rhinitis; chronic obstructive pulmonary disease; pulmonary infection; bronchitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating

```
e.g. ischaemic conditions, pulmonary vasoconstriction, allergies asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONs reduces side effects. The A-containing ONs break down with the release of deoxyadenosine which activates adenosine receptors causing bronchocomstriction and inflammation. AAA32313 to AAA35312 represent the nucleotide sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO:1 to 185, but the sequences of differ from the previously named sequences. SEQ ID NO:11 to 1680 (AAA33232 to AAA33392) are specifically claimed ONs from the present invention. N.B. Sequences given in the disclosure of the present invention door match up with their corresponding SEQ ID NO: sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            90 Ardakdakcicircecarciriecreciarricirciraridareciradaseciradada 149
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a new composition comprising an antiesnse oligonuclectide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammacory, antiallergic, antialtengic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   21 ProLeuGlnAlaArgAlaHisGluMet---ProAlaGlnLysGlnProProAlaAspAsp 39

Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating cancers and respiratory obstructions -

Disclosure; Page 217-218; 1592pp; English.

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodilator, antiliflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with carporating the factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and activity and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific anymes, binding proteins, adenosine molecules and their receptors, cytokine and chemokine receptors, adenosine receptors, bradykinin receptors, central nervous system (CNS) and peripheral nervous and non-nervous system peptide transmitters, defensins, growth factors, vascociated proteins. The anticluding respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or surfactoral phyporoduction which are sescitated with a disease or condition and peripheral wascondered with a disease or condition and peripheral response associated proteins. condition selected from pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), pulmonary transplantation rejection, pulmonary infections, bronchitis, and/or cancer. AAF18434 to AAF21543 represent human polynucleotide fragments and antisense oligonucleotides used in the exemplification of the present invention.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description
